Kaniow / Poland: Helvoet's newest production location in Eastern Europe extends your possibilities for rubber and assembly products

Helvoet Poland, located in the most industrialized part of southern Poland, is providing quality products and services to customers throughout Europe already since 2008. First as an exclusive partner for Helvoet and since 2018 as fully integrated member of the group.

In our factory in Kaniow, a highly motivated team of 170 production workers and engineers with an extensive expertise in the processing of rubber and plastic products is ready to support your project with lean and cost efficient processes and superior part quality.

Helvoet Poland is ISO IATF 16949 and ISO 9001 certified and counts with most modern facilities – which are currently being extended in order to offer more production capacity. In Kaniow we offer not only the full range of rubber manufacturing processes including compression molding, punching, stamping, deflashing, powdering, bonding, etc., but also many post-processing for thermoplastic and thermoset parts and assemblies with a zero-defect quality policy.

As the other Helvoet locations, Helvoet Poland can either be your single and direct partner or we can combine projects together with another Helvoet location if your project requires for example multiple material technologies or local to local service.

Contact us [here](#) for more information about the possibilities at Helvoet Poland.
