

From Tech Update October 2019

K2019 exhibition: What to watch out for

On Wednesday 16th of October at 10am, the Düsseldorf exhibition center opens up its doors once more for the K-show, the world's largest tradeshow for the polymer industry which takes place every 3 years.

Helvoet will again be part of it and we have many innovations with us which we will present during the 8 days of action with our team. Being such an international venue we will represent the complete Helvoet group with the latest and most advanced moulding technologies and components from all our factories.

Some of the main topics you should watch out for are:

- Integration of components by hybrid manufacturing
- Microfluidics – laboratories on a polymer chip
- Direct bonding of high performance rubber compounds
- Micron level machining of thermoset components
- Polymers in pump systems
- Group extension in Eastern Europe

You will find us in hall 5 at booth E34 and we will await you with the complete portfolio of manufacturing technologies, enabling us to offer you a one-stop-shop solution for your polymer or elastomer product.

If you plan to visit the event but do not yet have your free entrance ticket, do not hesitate and send us a short email to events@helvoet.com and we will be happy to invite you to the exhibition.

We are looking forward to meeting you at the K show.
